PROFESSIONAL SUMMARY

Machine Learning graduate student specializing in Agentic AI systems, Retrieval-Augmented Generation (RAG), LLM-powered workflows, and deep learning model development. Experienced in Python-based model training, evaluation, structured reasoning pipelines, and scalable data engineering solutions. Strong foundation in prompt engineering, model lifecycle management, and cross-functional collaboration for production-ready AI systems.

EDUCATION

Stevens Institute of Technology — M.S. Business Analytics & Artificial Intelligence (Expected May 2026)
Relevant Coursework: Machine Learning • Experimental Design • Web Mining • Optimization • Multivariate Analysis • Data Management

TECHNICAL SKILLS

Programming: Python, SQL

Agentic AI & LLM Systems: RAG Pipelines, Prompt Engineering, Structured Outputs, Tool Calling Logic, AI Agent Workflows

Deep Learning & NLP: BERT (PyTorch), Transformers, Model Training, Model Evaluation, Hyperparameter Tuning

Machine Learning: scikit-learn, XGBoost, LightGBM, Feature Engineering, Cross-Validation

Data Engineering: ETL Pipelines, Data Integration, Data Cleaning, PostgreSQL

Evaluation & Testing: Precision/Recall/F1, Error Analysis, Failure Mode Detection

Cloud & Tools: AWS SageMaker, GCP Cloud Run, Git, Streamlit

PROJECT EXPERIENCE

- 1 LLM-Based Incident Intelligence Agent — Designed AI agent pipeline with structured reasoning and RAG workflow; implemented confidence scoring and evaluation metrics for reliable inference.
- 2 Twitter Sentiment Analysis with BERT & RAG — Fine-tuned BERT (PyTorch), built contextual retrieval layer, executed full model lifecycle from EDA to deployment via Streamlit.
- 3 F1 Predictive Modeling System — Engineered features from telemetry data; trained gradient-boosted models achieving ~82% validation accuracy with SHAP interpretability.

INDUSTRY EXPERIENCE

Laurus Labs Ltd. — Quality Assurance Intern (Jan 2022 – June 2022)

- Developed SQL and Python workflows to extract, transform, and validate large production datasets
- Performed statistical validation, anomaly detection, and structured reporting improvements
- Collaborated cross-functionally to deliver actionable data-driven insights
