PROFESSIONAL SUMMARY

Data & AI engineering graduate student with hands-on experience building Python applications that integrate data from multiple systems and generate AI-driven insights. Strong background in API integration, data processing, and production-style tooling. Experienced in designing scalable data pipelines, structuring diverse datasets, and deploying AI-powered summarization workflows.

TECHNICAL SKILLS

Programming: Python (Advanced), SQL

Data Engineering: API Integration, Data Ingestion, Data Transformation, ETL Pipelines, Relational Databases

AI & Applied Analytics: LLM-based Summarization, RAG Pipelines, Feature Engineering, Model Evaluation

Frameworks & Tools: PyTorch (BERT), scikit-learn, XGBoost, Pandas, NumPy

Cloud & Deployment: AWS SageMaker, GCP Cloud Run, Streamlit

Engineering Practices: Git, Modular Code Design, Documentation, Workflow Automation

PROJECT EXPERIENCE

- 1 AI-Powered Incident Intelligence Tool — Built Python application integrating multi-source data via APIs; implemented RAG pipeline for AI-driven summarization and structured insight generation.
- 2 Multi-Source Sentiment Analysis Application — Designed data preprocessing pipelines and fine-tuned BERT (PyTorch); structured outputs for reporting and built evaluation workflows.
- 3 Predictive Analytics & Performance Modeling Tool — Developed SQL + Python data pipelines; optimized model performance through systematic evaluation and tuning.

INDUSTRY EXPERIENCE

Laurus Labs Ltd. — Quality Assurance Intern (Jan 2022 – June 2022)

- Executed SQL queries to validate and analyze production datasets
- Managed structured data within relational database environments
- Improved data quality processes through systematic validation and documentation

EDUCATION

Stevens Institute of Technology — M.S. Business Analytics & Artificial Intelligence (Expected May 2026)
