SUMMARY

AI and Software Engineering graduate student with experience building AI-assisted development workflows, automated testing systems, and machine learning applications using Python and modern AI tools. Skilled in developing AI agents that support software development tasks including code generation, refactoring, documentation, and automated testing. Experienced with Git-based version control, AI coding assistants, and collaborative development environments.

EDUCATION

Master of Science — Business Analytics and Artificial Intelligence
Stevens Institute of Technology | Expected Graduation: 2026

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript (basic)
AI Tools: GitHub Copilot, OpenAI Assistants API, Claude, LangChain
Software Development: Git, GitHub workflows, VS Code
Testing: PyTest, Unit Testing, Integration Testing, Automated Test Generation
Data Science: Pandas, NumPy, Scikit-learn
Tools: Jupyter Notebook, REST APIs, Docker

AI DEVELOPMENT PROJECTS

AI-Assisted Code Generation & Testing System

- Built AI-assisted workflow using Python and OpenAI APIs to generate and refactor software code.
- Integrated GitHub Copilot to automate documentation and test generation.
- Implemented automated unit testing pipelines using PyTest to validate AI-generated code.

AI Documentation and Code Review Assistant

- Developed AI assistant that analyzes source code and generates developer documentation.
- Implemented AI prompts to review and refactor Python code for maintainability.
- Integrated Git workflows for collaborative development.

AI Developer Productivity Tool

- Built Python application using AI tools to assist developers with debugging and documentation.
- Implemented automated workflows for generating unit and integration tests.
- Created documentation outlining best practices for AI-assisted development.

SOFTWARE DEVELOPMENT EXPERIENCE

- Developed Python applications for data analysis, ML experimentation, and automation workflows.
- Conducted exploratory data analysis using Pandas and NumPy.
- Built ML models using Scikit-learn for predictive analytics tasks.
- Created visualizations and reports to communicate insights.

CORE COMPETENCIES

AI-Assisted Software Development | Python Programming | Git Version Control | Automated Testing |
AI Coding Assistants | Debugging | Technical Documentation
