PROFESSIONAL SUMMARY

Master's student specializing in Agentic AI systems, LLM orchestration, and deep learning model development. Experienced in designing retrieval-augmented generation (RAG) pipelines, structured reasoning workflows, evaluation frameworks, and benchmarking methodologies for AI-driven solutions. Strong Python foundation with exposure to C/C++, software design principles, performance optimization, and SDLC automation.

EDUCATION

Stevens Institute of Technology — M.S. Business Analytics & Artificial Intelligence (Expected May 2026)
Coursework: Machine Learning, Deep Learning, Optimization, Experimental Design, Statistical Modeling, Web Mining

TECHNICAL SKILLS

Programming: Python (Advanced), SQL, C/C++ (Academic Exposure)

Agentic AI: Multi-Agent Workflows, RAG Pipelines, Prompt Engineering, Tool Calling, Orchestration Logic

Deep Learning Frameworks: PyTorch (BERT Fine-Tuning), scikit-learn, XGBoost, LightGBM

Evaluation & Benchmarking: Precision/Recall/F1, Cross-Validation, Error Analysis, Performance Benchmarking

Reinforcement Learning: Foundational Understanding of Policy Learning and Reward Modeling

Inference & Deployment: Model Lifecycle Management, API Integration, Streamlit

Systems & Tools: Git, Linux (Basic), SDLC Exposure, ETL Pipelines

Cloud: AWS SageMaker, GCP Cloud Run

AGENTIC AI PROJECT EXPERIENCE

- 1 LLM-Based Agentic Incident Intelligence System — Designed and implemented a RAG-based agentic pipeline with structured reasoning, tool-calling logic, confidence scoring, and benchmarking for reliability evaluation.
- 2 Multi-Stage RAG Sentiment Agent with BERT — Fine-tuned BERT (PyTorch) and integrated contextual retrieval workflows; built modular evaluation framework tracking precision, recall, and F1-score.
- 3 Predictive Modeling & Performance Analysis System — Engineered features from large datasets; optimized model performance using cross-validation and hyperparameter tuning achieving ~82% validation accuracy.

INDUSTRY EXPERIENCE

Laurus Labs Ltd. — Quality Assurance Intern (Jan 2022 – June 2022)

- Analyzed structured datasets for compliance validation and reporting
- Improved documentation and structured review processes within data workflows
- Supported cross-functional validation aligned with structured SDLC processes
