PROFESSIONAL SUMMARY

Data Science and Business Analytics graduate student specializing in **statistical analysis, marketing analytics, predictive modeling, and large-scale data analysis**. Experienced in Python and SQL for **data wrangling, ad-hoc analysis, and building production-ready analytical solutions**. Proven ability to translate complex datasets into **actionable business insights** that improve performance and decision-making. Strong interest in **media measurement, attribution modeling, and customer analytics**.

EDUCATION

Stevens Institute of Technology, Hoboken, NJ

M.S. Business Analytics & Artificial Intelligence — Expected May 2026

Relevant Coursework:

Machine Learning • Experimental Design • Multivariate Analysis • Optimization • Web Mining • Data Management

TECHNICAL SKILLS

Programming: Python, SQL, R

Data Analysis: Pandas, NumPy, Statistical Analysis, Hypothesis Testing, A/B Testing

Machine Learning: Regression, Classification, Clustering, XGBoost, LightGBM, Model Evaluation

NLP & AI: BERT, Transformers, RAG pipelines, spaCy

Data Visualization: Tableau, Power BI, Plotly, Streamlit

Data Engineering: Data Cleaning, Data Wrangling, ETL Pipelines, PostgreSQL

Cloud & Tools: AWS SageMaker, GCP Cloud Run, Git, Docker (basic)

PROJECT EXPERIENCE

F1 Race Strategy & Performance Analytics

Python, XGBoost, SHAP, Tableau

- Engineered features from large-scale race telemetry data to perform **predictive and exploratory data analysis** on performance drivers
- Built gradient-boosted models achieving **~82% validation accuracy**, improving baseline performance by 12%

- Conducted **statistical analysis and feature importance (SHAP)** to identify key factors influencing outcomes
- Developed interactive Tableau dashboards to communicate **data-driven insights to stakeholders**

Twitter Sentiment & Customer Insight Analysis (BERT + RAG)

Python, Hugging Face, SQL, Streamlit

- Built an end-to-end NLP pipeline to analyze customer sentiment and generate **actionable business insights from unstructured text data**
- Fine-tuned BERT model improving classification accuracy by **~12% over baseline**
- Performed **data cleaning, feature engineering, and ad-hoc exploratory analysis** on large tweet datasets
- Deployed an interactive Streamlit application enabling real-time sentiment monitoring and reporting

LLM-Based Incident Intelligence & Automation

Python, LLM APIs, Data Processing

- Designed an automated analytics pipeline to classify incident reports and surface **root-cause insights for operational teams**
- Implemented confidence scoring and structured outputs to support **data-driven decision making**
- Improved analysis efficiency by reducing manual review time through automated text processing

Industry Experience

Laurus Labs Ltd. — Quality Assurance Intern

Jan 2022 – June 2022

- Analyzed large-scale production and stability datasets using **SQL and Python**, supporting compliance and quality monitoring across multiple manufacturing batches
- Performed **data cleaning, anomaly detection, and statistical validation** on batch and deviation reports, improving data reliability for downstream analysis
- Conducted **ad-hoc exploratory analysis** to identify process inconsistencies and support root-cause investigations
- Standardized QA documentation workflows and data review procedures, improving **audit readiness and cross-functional reporting efficiency**
- Collaborated with quality and operations teams to translate raw data into **actionable insights for process improvement**
